EDUCATION

Georgia Institute of Technology

Atlanta, GA

Master of Science in Computer Science, BS/MS Program

Expected May 2028

Bachelor of Science in Computer Science, GPA: 3.53

Expected May 2027

- Relevant Coursework: Data Structures and Algorithms, Design and Analysis of Algorithms, Machine Learning, Databases, Computer Organization and Programming, Systems and Networks, Objects and Design

TECHNICAL SKILLS

Languages: Java, Python, SQL, C/C++, Assembly, JavaScript, HTML/CSS

ML/Data: TensorFlow/Keras, scikit-learn, OpenCV, dlib, NumPy, pandas, Matplotlib

Systems/Backend: asyncio, SQLite, REST APIs, Django, Spring Boot, MySQL, MongoDB, InfluxDB

Developer Tools: Git, VS Code, Jupyter Notebook, CI/CD, Model Serving, Agent Evaluation, Performance Benchmarking

EXPERIENCE

Research Intern

May 2026 – August 2026

WISH Center, Georgia Institute of Technology

Atlanta, GA

- Developed a MobileNetV3Small-based eye-state classifier and audited 47,236 labeled images for duplicate and split-leakage risks.
- Integrated eye-state predictions from recorded video and live camera feeds into PERCLOS-based fatigue timelines with annotated visual outputs.

Cybersecurity Researcher — DIB Cyber Compliance VIP

August 2026 – Present

Georgia Tech VIP Program

Atlanta, GA

- Contribute to multidisciplinary cybersecurity research supporting small and medium-sized Defense Industrial Base manufacturers pursuing CMMC compliance under NIST SP 800-171.
- Evaluate security controls, risk-management practices, and cybersecurity tools for compliance, threat mitigation, and incident response.

PROJECTS

TraceLab AI | *Python, asyncio, SQLite, REST APIs*

August 2026

- Built a dependency-light agent evaluation platform with asynchronous execution, SQLite trace replay, REST APIs, and CI regression gates over 120 deterministic tool-use cases.
- Compared direct and planner-executor strategies, raising exact task success from 50% to 100% on the saved benchmark while passing all recovery, refusal, and malicious-output cases.
- Implemented timeouts, cancellation, retries, rate limiting, schema migrations, and Prometheus-format metrics, passing 9 unit, integration, and end-to-end tests.

FluxServe | *Python, NumPy, asyncio, Model Serving*

August 2026

- Built a deadline-aware inference gateway with bounded queues, cancellation, safe caching, versioned backend fallback, and Prometheus-format latency and batch metrics.
- Increased NumPy CPU throughput 150% (1,873 to 4,688 requests/s) and reduced p95 latency 65% (18.08 to 6.39 ms) via dynamic batching at concurrency 32 over 1,200 requests, with zero errors.
- Validated FP32, FP16, and INT8 backends against a Python reference and passed 11 unit, integration, load-smoke, and API end-to-end tests.
